

Lumber Tutorial

The following is a step by step guide to harvesting lumber

Required Items:

1. PD ~Axe (other axes will not work)
2. Lumber Cart
3. Wear your combat meter (make sure you have stamina)
4. Wear your PD HUD

Steps:

1. Go to the Lumber yard
2. Right click Chalkie and select chat. After you sit, left click Chalkie and he will offer you several different types of carts. Select the Lumber Cart.
3. Once your lumber cart appears, right click the harness at the front and ride it.
4. You do not need a horse but if you have a horse you may be able to use if it is they type you wear. If you don't have one and want one a kiosk is there to get a free demo.
5. Now, without a horse this will look funny because you can use it with or without a horse if you want.
6. Once mounted on the harness, you're ready to go. Use the arrow keys to move and steer the cart.
7. Go through the tunnel to the Forrest level and start exploring for a "PD ~Tree".
8. Once found stand and get off the cart, then wear your PD ~Axe and right click the tree and sit. Then click the trunk of the tree. An Animation should start of you cutting the tree
9. It will take several minutes for you to cut the tree down. If you don't have you combat meter on and in character it will not work.
10. Once finished the tree will fall and also a pile of wood. Click on each and the Log will be stored in your cart (3 logs per cart)
11. Once your wagon is full return to the Lumber Mill and place your cart near the crane and loop of rope located on the sea side of the Lumber Mill
12. Click the loop on the rope hook and an animation will begin of the crane taking a log and placing it in the Mill. Eventually a pile of lumber will appear.
13. Click the pile of lumber and it will be added to your inventory.
14. Wait for the crane to move back into its starting position BEFORE you click it again. If you don't allow the animation to full play and stop. Clicking too early might eliminate your pile of lumber
15. Once your last log is moved the cart will vanish and you can click to pick up your last load of lumber.

Note: Occasionally while you are cutting for a long time and the tree will not fall. There are 3 reasons we've found:

1. You are not wearing your combat meter in the "in character" mode.
2. The axe is broken and you need to replace or repair it.
3. If it isn't the first two reasons, occasionally it just doesn't cut the tree down. If that happens, stand, detach it, and send it to a friend. Have them wear it, then detach and send it back to you. That usually fixes the problem
