

Mining and Smelting Ingots

Items Needed:

1. PD ~Pickaxe
2. Mine Cart
3. Wear your combat meter (make sure you have stamina)
4. Wear your PD HUD

STEPS

1. There are 2 mines; a small one and a large one. At the outside entrance of a mine and click on the cart. When a cart is rezzed, right click and “Push” on it and walk the cart into the mine entrance
2. **Small Mine:** When you enter the small mine, just go down the ramps until you find ore deposits.
3. **Large Mine:** When you enter the large mine, you will notice an elevator platform. Slide your cart into either side of the elevator (Make sure its all the way in). If you wish, you may go outside and get another cart and place it on the empty spot left on the elevator platform (The elevator can take two carts at a time)
4. **Large Mine (cont’d)** In the center of the elevator platform there is a square long box, SIT on it
5. **Large Mine (cont’d)** Now if you look at the side of the elevator on its wall, you will see a button that is red and green. Click on the RED button. This will LOCK the carts in place so that they dont fall off as you descend down the elevator
6. **Large Mine (cont’d)** Next to the left of those buttons just outside the elevator platform you will see a lever. This will turn on the elevator and you should be on your way down
7. **Large Mine (cont’d)** Once you reach the bottom, you should press now the green button, this will RELEASE the carts from the elevator.
8. Push your cart to sit on and pull the cart out of the elevator (if you got a 2nd cart in the large mine).
9. Proceed down the tunnel until you either reach a vein. . It will look like a crystal embedded in the wall.
10. Make sure you are wearing your Pick Ax and click and sit on the crystal. Click the crystal again and your Avatar should now be doing a mining motion
11. Once finished a piece of the crystal will fall off. Click and push your cart and click again on the piece that falls off and it will be automatically loaded into your cart.

Mining and Smelting Ingots

12. Once the cart is full (4 pieces of ore) take it and leave the mine (to the elevator if in the large mine).
13. If you are in the large mine you will come out directly across from the cave leading back to the main level. If you are exiting the small mine, you will need to push your cart all the way back to the cave leading to the main level.
14. When you come out of the cave on the main level, turn right and you see the smelter ahead of you.

IMPORTANT NOTES:

- Carts stay rezzed for about 4 hours
- in order to make ingots, you will always need COAL, so fill your cart with 4 ore and 4 COAL
- LEARN your ore formulas
- If your Pick Ax doesn't work anymore, it may be BROKEN. This randomly happens. You will need to either fix or replace your tool. So it's smart to have a backup
- Ore comes from the Mine, Ore is turned to Ingots at the smelter, Ingots are turned to coin at the Assay

SMELTER

In order to make ingots for use as building materials or coin, you must bring them to the Smelter. The procedure for that is as follows:

1. Push your cart from the mine to the Smelter by taking the tunnel directly right from the mine.
2. Bring your ore cart close to the Smelter. (Make sure its close)
3. Click the inside of the Smelter and a menu will appear. Click LOAD ORE. The ore cart will disappear and your ore will be in the smelter.
4. If you have o get your other cart (the one with 4 coal hopefully) and load that into the smelter
5. After all your ore is loaded click the Smelter base again and select SMELT ORE
6. Click the inside of the smelter again, and choose the type of ingot you want to smelt. When finished an ingot will drop out in front of the smelter.
7. Pick up your Ingot and it will appear in your objects folder

REMEMBER: YOU NEED COAL TO MAKE ANY KIND OF INGOT. LEARN YOUR FORMULAS
